- **Multiple configurations available; 2, 3 or 4-sided**
- **Available unassembled or factory assembled**
- **Widths up to 11-1/4" and up to 16' in length\***

*(\*based on species availability)*

# LOCK MITER FAQ'S

## WHAT CONFIGURATIONS ARE AVAILABLE?

Lock miter components are available in a variety of configurations, with 2, 3, or 4-sided being the most common.

If your application calls for something out of the ordinary, just let us know - we will be happy to review it!

## WHAT SPECIES ARE OFFERED?

We offer all of our standard species in both paint and stain grade options. *(Please note that MDF does not lend itself to this application and is not available for lock miter components.)*

## HOW ARE COMPONENTS SHIPPED?

Lock miter components are available unassembled or factory assembled.

Unassembled components are packaged with a disposable filler block to protect the edges and help mitigate potential damage during shipping and handling.

Assembled beams contain spacer blocks to stabilize the components for packaging and transit.

*Filler blocks are used to protect the edges of all unassembled components.*

## HOW DO WE QUOTE/ORDER?

Pricing and lead time may be obtained quickly and easily through Koetter Connect! Lead time varies between 5 & 15 production days, depending on size and configuration. If you are not a Koetter Connect user, please contact our inside sales team and they will be happy to assist you with pricing and availability.
